

Wimba ASP SERVICES

Quick. Affordable. Reliable.

Wimba understands the challenges of implementing new systems. Many districts and schools are challenged by the rapid growth in the number of mission-critical IT projects they need to implement during the academic year.

Instead of adding one more application to learn, support, monitor, and maintain, leave it to the experts. The reliability of Wimba ASP (Application Service Provider) Services ensure teaching can happen 24 hours a day, seven days a week.

Up in Less Than Three Days

Your IT team has been there before: an installation CD-ROM arrives or an installation file is downloaded from a support site. The installation procedure requires dedicated resources, specialty skills, and time. Wimba ASP Services can get your district or school up and running in less than three days, leaving your IT staff available to concentrate on other key projects. Schedule training for your teachers on day four.

Easy Upgrades and Updates

The Wimba ASP Services team consists of experts who install and maintain the Wimba Collaboration Suite for deployments large and small. This team manages all aspects of operation including updates, upgrades, and patches. In addition, Wimba ASP Services operates in close communications directly with the Wimba Development team to ensure rapid trouble resolution for even the most complex issues that can arise.

Ensure Availability

The availability of the Wimba Collaboration Suite for students and teachers is crucial to class participation and student achievement. Any downtime can be too much, especially when students are engaging in collaborative activities and discussions. Wimba ASP Services is designed for multiple redundancies at all possible points of failure to ensure application availability.

Global Reach, Local Service

Wimba is an international company with offices in three countries and believes in delivering local service. Wimba has datacenters in the United States and Europe and connects to the UK-wide JANET allowing your school to minimize transmission delays and ensure the highest levels of connectivity and reliability. With Wimba ASP Services, you can leave the hosting to the experts but keep your data close to you.

“We believe that Wimba hosting this service is better than us trying to manage a server with this service. Overall, I highly recommend Wimba ASP Services and we are planning to use Wimba more and more over the next several months.”

- Dave Overby, Chief Information Officer,
Minnesota State Community and
Technical College

Secure Your Data

Wimba's data center facilities offer secure access to the applications. The physical security measures include building security with access lists, proximity cards and fingerprint scanners and a separate proximity card and PIN for accessing locked cabinets. The system is regularly monitored for unauthorized activity to ensure privacy and security.

Affordable Pricing

Wimba designs its products and services exclusively for education, and Wimba ASP Services' affordable pricing is a reflection of our commitment to your success. Wimba ASP Services offers districts and schools the advantages of an end-to-end solution to ensure the focus is on teaching, not technology.
